The Korea Daily News.

Seoul, Korea, Wednesday, May. 19th, 1926.

KWANGJU LEPER HOSPITAL STATISTICS.

II

Korean people here are becoming so afraid of leprosy that even the cured cases who are sent out are dreaded and feared. So now the cured cases are a greater problem than those not cured. Its indeed a hard life for the poor leper.

Its our dream and hope to have a big leper farm and teach all who come how to farm and provide a good portion of their support and also how to keep in good health.

From a medical standpoint we are getting our best results with the weekly injection of chaulmoogra oil.

THE FOLLOWING STATISTICS FOR THE KWANGJU PLANT ALONE.

370 have received baptism here, seven elders trained up and 11 deacons present now. 144 have received certificates from receting the shorter catechism and 139 the S. Childs catechism.

There are 60 Sunday School teachers in the home and 31 lepers have received special and intensive Bible training during the past four years.

It is now costing us Yen 7.65 per month to care for a leper (About $3.80).

CHANGE OF POLICY; Formerly the leper was considered incurable and was taken into our plants as such. Now the disease can be arrested and held in check in over three fourths of the cases so we must change the policy and plan to lead them to self support. This we hope to do with a farm and lead the lepers to farming and providing a good portion of their care. Won't you pray with us to this end and help to make it a success?

R. M. Wilson.
